

VLC

Faire pivoter le film

The image shows the VLC media player interface. At the top, the playback controls are visible, including a play button, stop, previous, next, and volume icons. A red arrow points to the 'Effets' (Effects) icon in the playback bar. Below the playback bar, the 'Ajustements et effets' (Adjustments and effects) dialog box is open. The 'Effets vidéo' (Video effects) tab is selected. Within this tab, the 'Géométrie' (Geometry) sub-tab is active. The 'Transformation' checkbox is checked, and the dropdown menu below it is set to 'Rotation de 90 degrés'. A circular gauge labeled 'Angle' is visible below the dropdown. To the right, the 'Incrustations' (Overlays) section is visible, with 'Lignes' and 'Colonnes' set to 3. A 'Fermer' (Close) button is at the bottom right of the dialog box. Four yellow circles with numbers 1 through 4 are overlaid on the image, with red arrows pointing to the 'Effets' icon, the 'Effets vidéo' tab, the 'Transformation' checkbox, and the 'Rotation de 90 degrés' dropdown menu respectively.
